# Enhanced ELAN functionality for sign language corpora

Onno Crasborn
Radboud University Nijmegen

Han Sloetjes
Max Planck Institute for Psycholinguistics

This poster presents new functions added between versions 2.6 and 3.4 of ELAN in the context of the Corpus NGT *project between 2006 and 2008.*

New menu bar structure

Drag up and down to resize media window-timeline viewer

Set colour of tier labels to visually group independent tiers
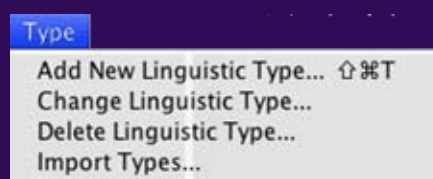

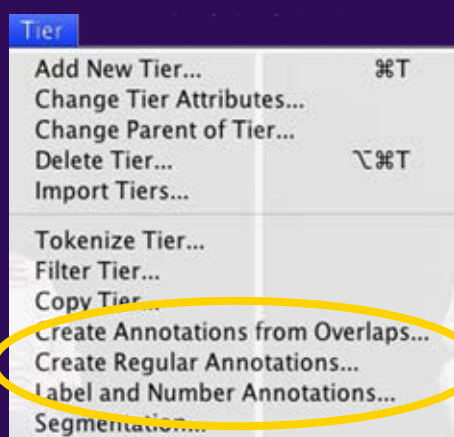

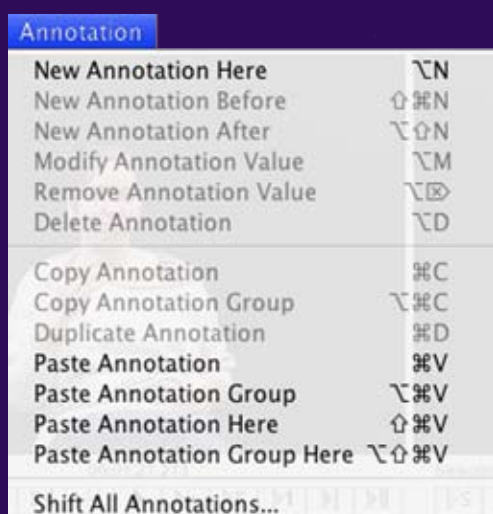

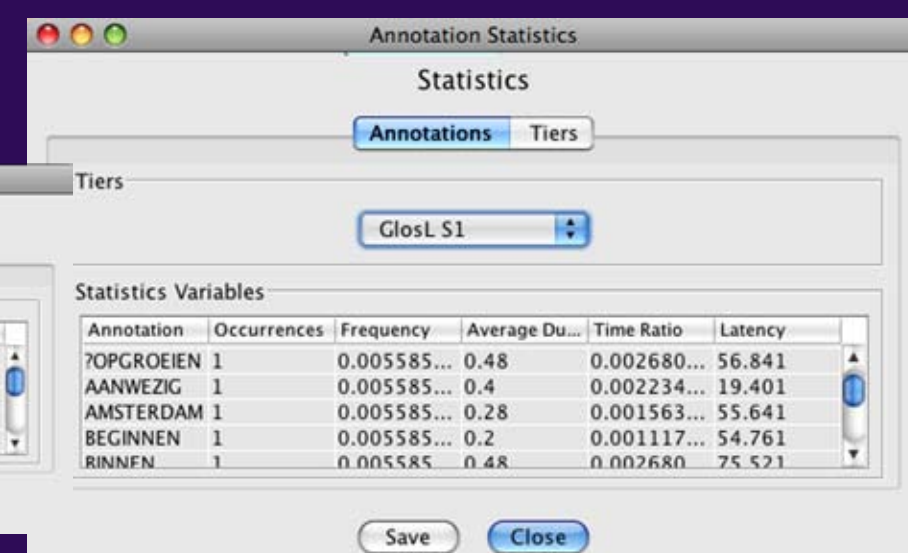

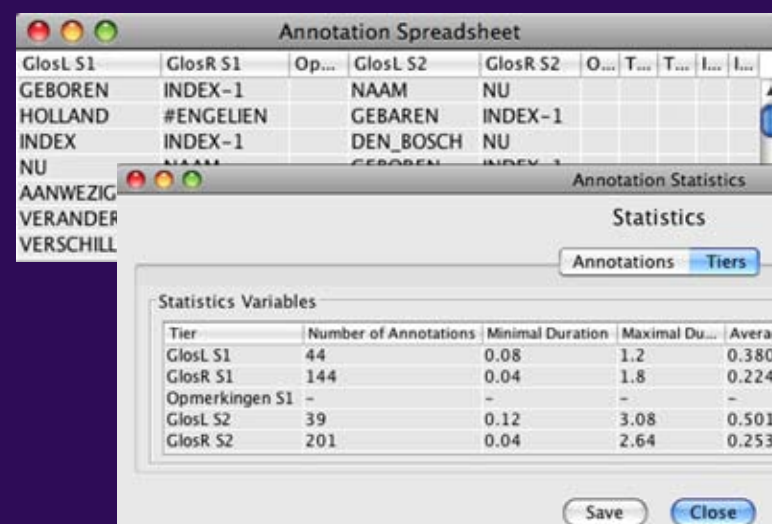

Display number of annotations per tier

'Duplicate annotation' (cmd-D) is very convenient for creating two-handed glosses: it copies the selected annotation to the active tier
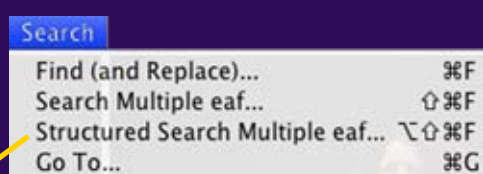

Select one single tier as the basis for the annotation density viewer: very useful for richly annotated documents

Select which of the linked media files are displayed

Automatically generate annotation content.

Perform complex searches within a selection of EAF files.
